

# Test

## 1.The main interface

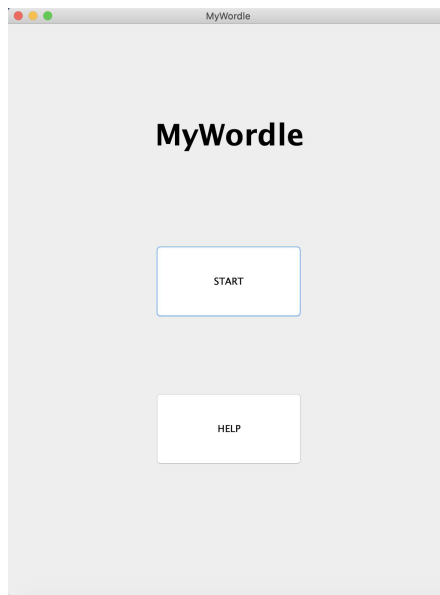

Fig 1

## 2.The input is invalid

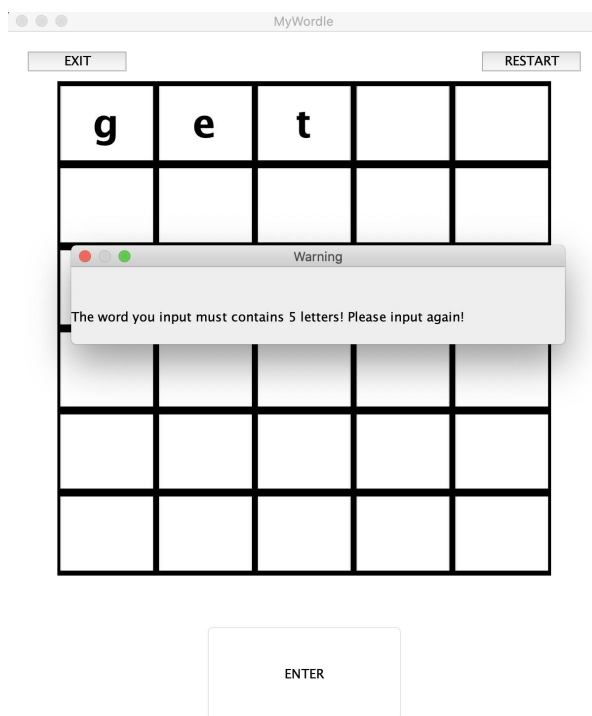

Fig 2.1

If the word we input is not a 5-letter word, such as get, the program will warn(Fig 2.1).

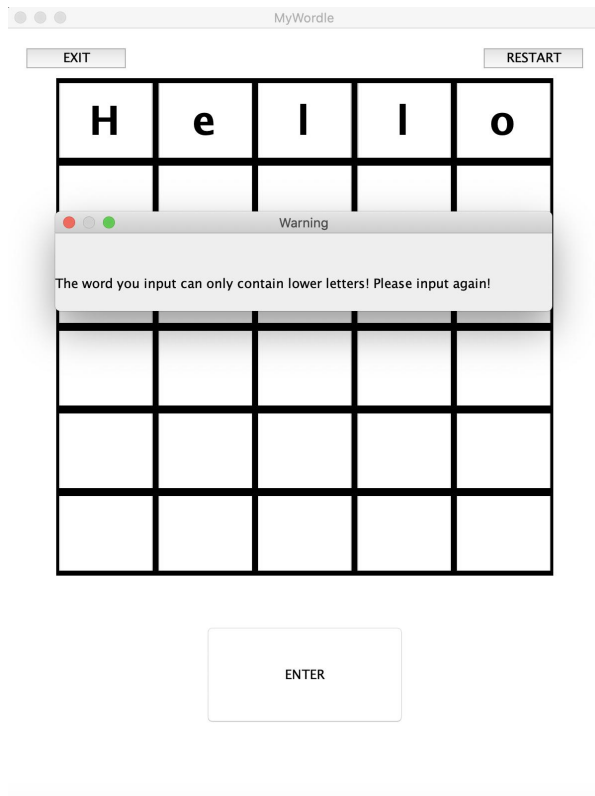

Fig 2.2

If the word we input has invalid character, such as Hello(H is a capital letter), the program will warn(Fig 2.2).

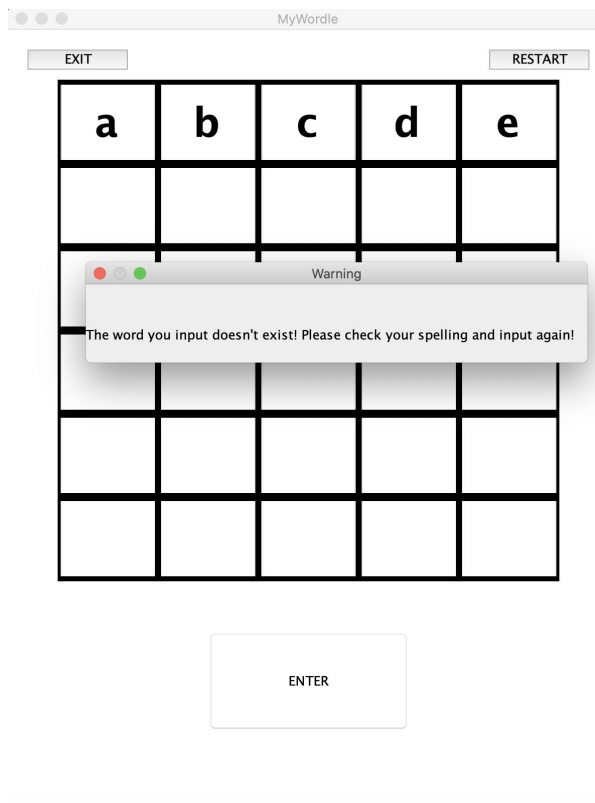

Fig 2.3

If the word we input doesn't exist, such as abcde, the program will warn(Fig 2.3).

3.Game ending in a win

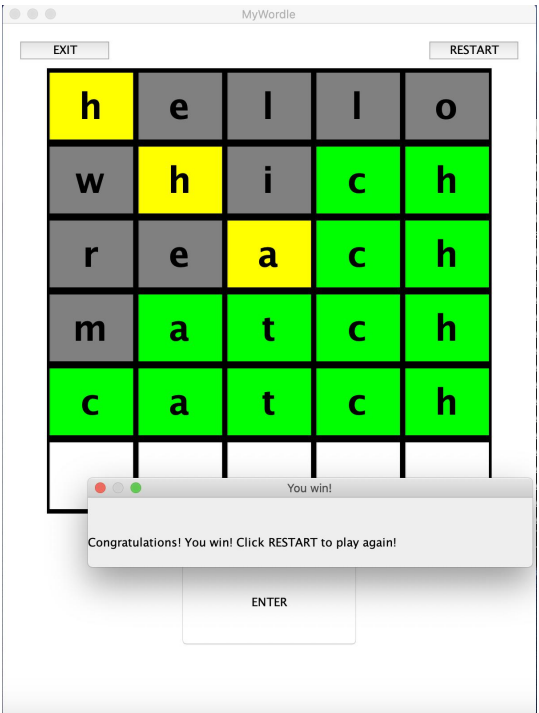

Fig 3

As Fig 3, I guess the word correctly in 5 attempts, the program tells me that I'm win. At the same time, all textfields are locked.

4.Game ending in a lose

Fig 4

As Fig 4, I don't guess the word correctly within 6 attempts, the program tells me that I'm lose, and tells me the right answer.
